The Story of Chad Brad

Chad Brad just finished a day at his sales job. He decided he needed to unwind after a stressful day at his job.

Chad Brad has a great idea and decides to go out to the bar to unwind and have a memorable night.

Chad Brad showed up to his favorite bar and to his surprise the line was wrapping the building. He left disappointed and started to walk home.

Chad Brad ran into Brad Chad on the way home and told his friend that the line at his favorite bar was to long and doesn't want to wait. Brad told his friend not to worry and to just download this new app, it will solve all of his problems.

Chad Brad Quickly downloaded the app and to his delight, discovered he had all the bars displayed with in the nearby location; with their capacity and wait times displayed directly to him.

He could also filter between different types of bars based on their setting.

He found a new bar under the club category: that looked interesting to him, had high capacity, and low wait time. Unfortunately he discovered that the club was 2 miles away and didn't want to walk that far. Lucky for him he was able to sign in to his Uber account through the app and was able to click one button to have a car on the way to his location with the target location to be his desired club.

He arrived safely to the bar and got right inside and was able to have a great night!

# Setting Caleb Martin

James Pint is a habitual drunk, brought on by his chronic depression. It's nearly happy hour, and so he goes on the app to look for a nearby bar.

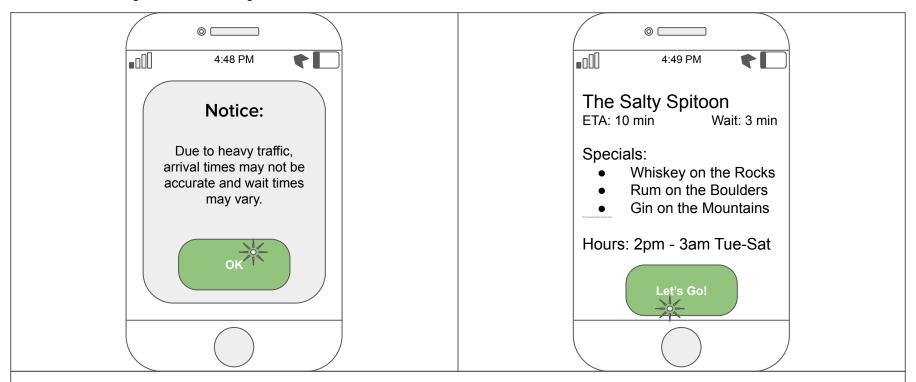

## Warning: Weather Alert

However, his location data shows harsh weather soon. The app automatically pulls up a warning, but he ignores it and continues on.

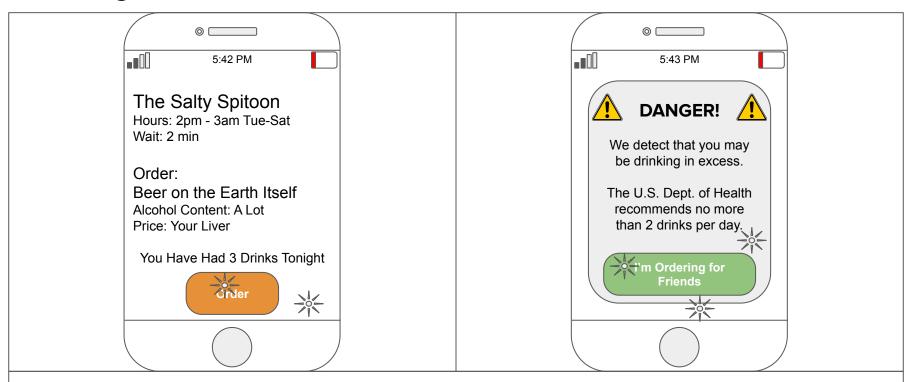

Note: Indicates a tap from the user.

#### Advisory: Heavy Traffic

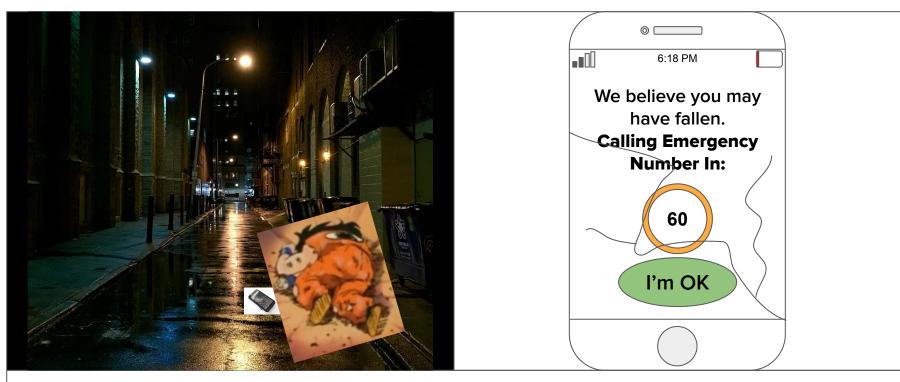

The app detects that there is heavy traffic near James or his destination, and informs him that the ETA and wait time may be inaccurate as a result.

### Serving Limit Shutoff

James has been ordering drinks through the app, but when he goes to order another now that he has had too much, the app warns him to stop unless he is not ordering for himself. Drunkenly, he ignores this, too.

#### Impact Detector

After some time of wandering the streets, James's excessive drinking catches up to him and he blacks out in an alley. The app detects the fall and begins the emergency contact procedure.

#### **Automatic EMS Call**

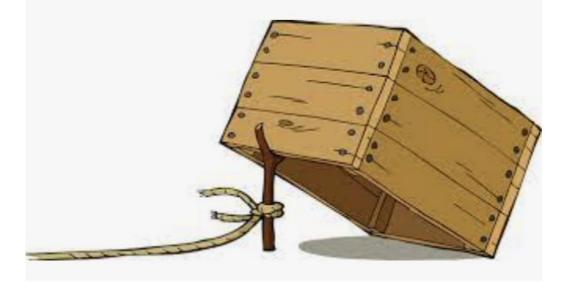

Once the 60 second timer expires, the app automatically contacts emergency services with his location. It also contacts James's brother, who was listed as an emergency number in his contacts.

NIUBI, a talented systems engineer, is invited by the boss of software Bar, to help fix bugs they can't fix.Bar's internal system was attacked by other hackers. The original security officer was bribed by another company to delete the source code that kept the system secure before leaving. NIUBI lived up to expectations, building a more secure system while resisting attacks from different directions for an average of an hour.

Through the direction of attack and previous experience, NIUBI has determined that the purpose of the attacker is only to influence the background system of the software and steal benefits from it.

Knowing the enemy's intentions, NIUBI immediately deployed traps. Luring the enemy into a trap of his own ingestion. After entering the trap, take advantage of the enemy's greed and let him fall into the trap. Let it go into an infinite loop, can't get out

The results are exactly the same, after the enemy into the trap, the trap is actually a money laundering company behind the system. NIUBI immediately called the police and dealt with it, not only punishing the enemy but also making it unable to compete with Bar software.

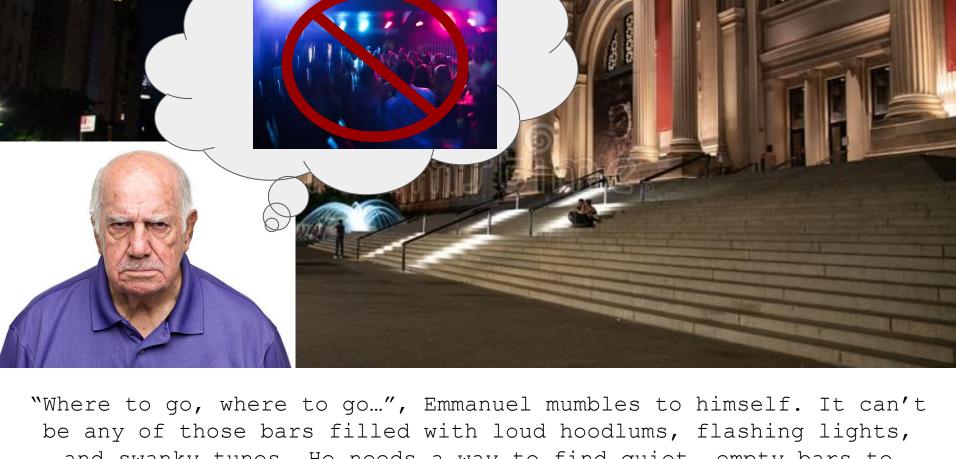

In order to do justice, NIUBI explained in court that the money laundering system was actually a trap software set by himself. Although rivals, but to maintain the trust between people. NIUBI defended him and dropped charges of money laundering.

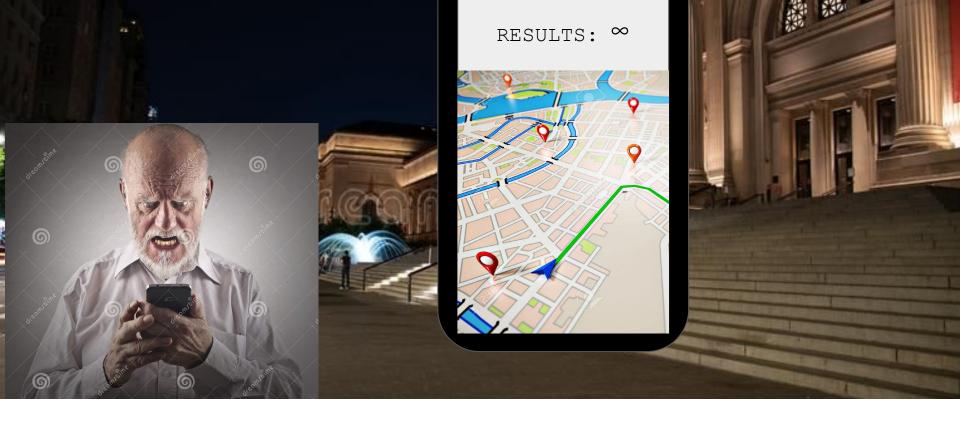

Network security is urgent. The boss of BAR software declared that NIUBI would be invited to continue to serve as the network security officer of BAR software, and it is the responsibility of every one of us to protect users' funds and capital information.

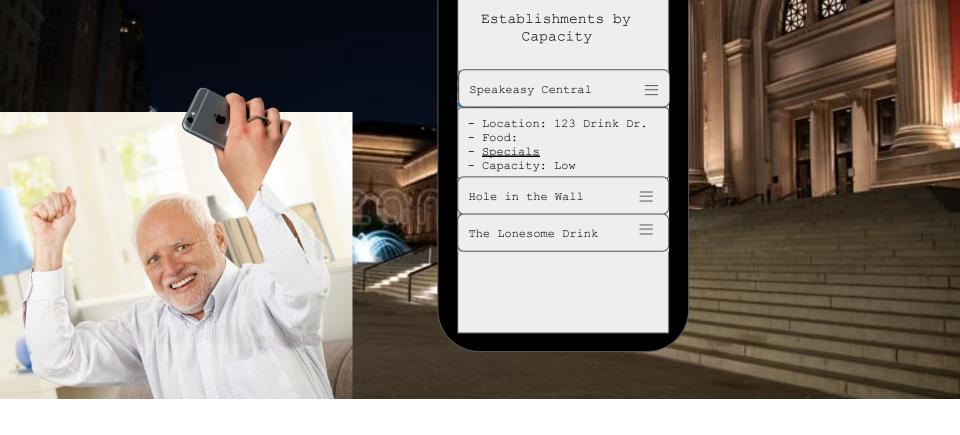

Emmanuel finds himself at the end of another tedious day of work. Tired, stressed, and frankly annoyed at life, he wants a drink to ease his nerves.

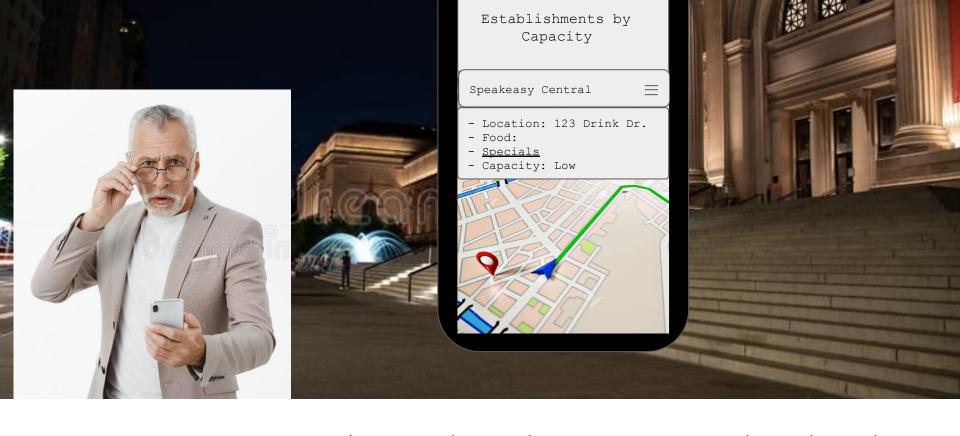

and swanky tunes. He needs a way to find quiet, empty bars to truly enjoy his night.

Emmanuel opens his standard map app and begins searching for local bars near him. "No, no, no! I need a quiet bar, stupid phone!" He then tries searching on Joogle.com, but the results are still too much.

Emmanuel decides to open our local bar app with little else to lose. To his surprise, the app's interface is simple to use, and the results are directly organizable by current capacity.

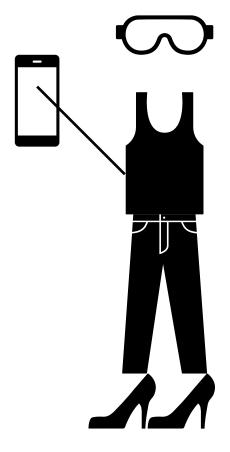

Emmanuel taps on the location of his choice and can now view directions to the location on a local map app. "Finally... something simple," Emmanuel mumbles as he begins heading towards Speakeasy Central.

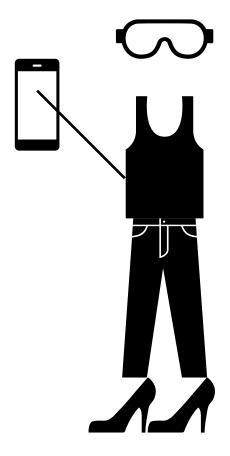

Emmanuel can drink and unwind knowing that the bar he chose fits his capacity needs. "Ah, peace and quiet. Bartender, get me some more of that peat-fired scotch!"

Mark Valentino Storyboard.

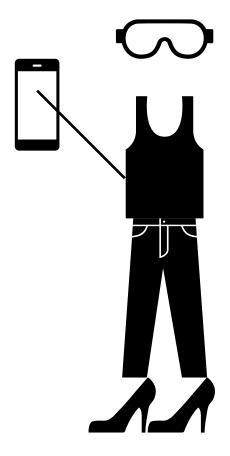

"It's Saturday and have no work tomorrow. Do you want to get a drink?"

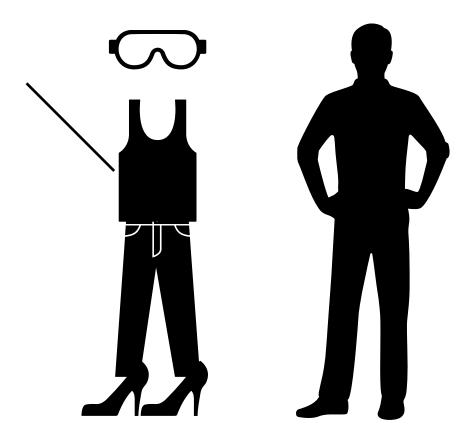

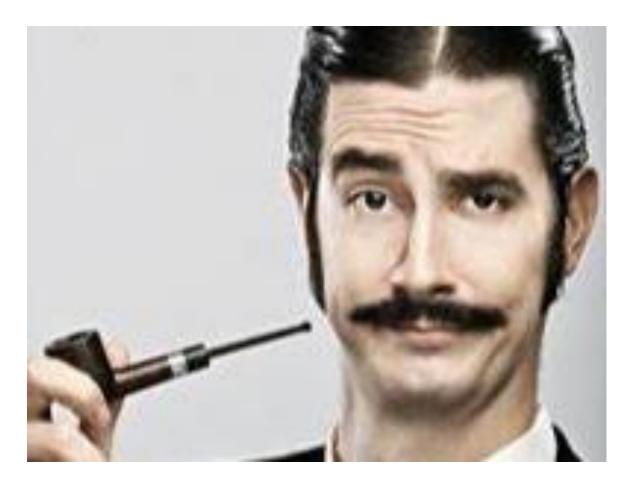

"Someplace that isn't too crowded and can serve us quickly. Let me check the Bar App" BAR APP Bars sorted by wait time: Gamecock Bar: 10 minutes Moe's Tavern: 12 minutes Casino Royale: 15 minutes

"Let's go to the Gamecock bar!"

"Wow this app is great!"

Sir Bradford Henry Benjamin IV is sitting at home in his luxury mansion. Drinking a fine wine when he decides that he needs to find a wine establishment that serves high level tastes equip for his uniquely distinguished palate.

He leaves his mansion, In a drunken rich man stupor. Searching for the perfect location to get his fix.

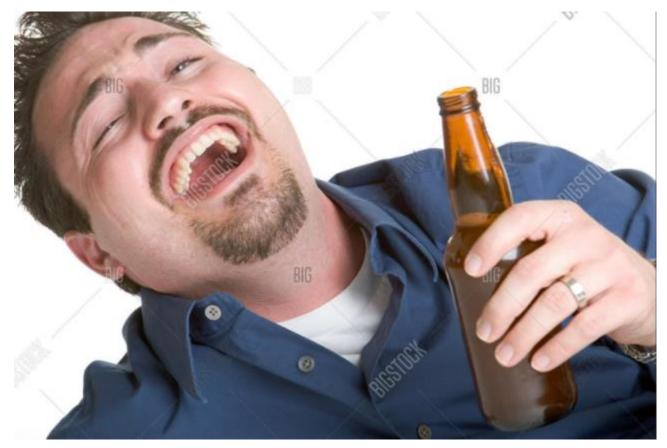

He keeps searching and searching, unable to find the nearest pub that serves his preference of the highest fine wine.

He then remembers a device that a peasant once made and that his acquaintances recommended to him called a "Celle Pheone."

He pulls out his device. Searching through the app store and finds a special little app. One that finds the nearest pub with an added benefit! A coupon which saves him money. His favorite thing in the world.

He goes to the pub that he found. Uses the coupon and finally gets his drunken fix. He is happy, "healthy" and has finally, excited that he saved some money!
